Lyophilized fraction: Live modified viruses of Infectious Bovine Rhinotracheitis (IBR), Bovine Viral Diarrhea (DVB) type I and type II, Bovine Syncytial Respiratory Virus (BRSV) and Parainfluenza (PI3).

Liquid fraction: Water for injection c.b.p. 2 mL.

### PRESENTATIONS

Bottle with lyophilized:

10 and 50 Dosage.

Bottle with sterile diluent:

20 and 100 mL.

### INDICATIONS

Live modified vaccine for the prevention of infections caused by bovine infectious bovine rhinotracheitis, bovine viral diarrhea types I and II, Bovine Syncytial Respiratory Virus and Parainfluenza3 in healthy cattle.

### DOSE

Transfer aseptically the entire contents of the diluent bottle to the bottle containing the lyophilized fraction and shake well. Apply using aseptic technique 2 mL in healthy animals. Calves vaccinated before 6 months should be re-vaccinated at six months of age or at the time of weaning.

Annual vaccination is recommended.

### ADMINISTRATION MODE

Intramuscular or subcutaneous.

### WARNINGS

Do not use in pregnant females since it can cause abortions, however, it can be applied to pregnant cows that have been treated with this product previously, at least 12 months before conception.

Do not use in lactating calves unless their mothers have been vaccinated during the past 12 months as mentioned above.

When reconstituting the vaccine do not use syringes or needles disinfected with chemical agents. Once the container is opened, use the entire contents.

Keep refrigerated at a temperature between 2° and 7° C, do not freeze.

Do not expose the product to sunlight.

Any biologic can cause anaphylactic reactions. In this case, the use of epinephrine followed by appropriate support therapy is recommended.

Do not vaccinate 21 days before the slaughter of animals intended for human consumption.

Dispose of the container securely, lock or incinerate.
