Lapimicina®
Injectable Oxytetracycline

REG. SAGARPA Q-2083-004

FORMULA
Each mL contains
Oxytetracycline base
(as clorhydrate of Oxytetracycline)  50 mg
Vehicule q.s.                                              1 mL

DESCRIPTION / INDICATION
Broad spectrum antibiotic indicated for the treatment of pneumonic problems, enteritis, leptospirosis, as well as diverse infectious septicemic processes that may be caused by germs susceptible to oxytetracycline.

INDICATED SPECIES
All species

DOSAGE AND ADMINISTRATION
Administer 5 to 10 mg per kg of body weight for 4 days in a row.
It could be administered through any via according to the necessities.

PRECAUTIONS
Due to bacteriostatic drugs interference with penicillin bactericide action, do not administer oxytetracycline concurrently with penicillin.
The use of this product can result in local transitory irritation which is manifested through swelling and discoloring in the site of injection. The pain produced by the injection can be minimized by heating the solution at a body temperature before application, also avoiding inadequate techniques of injection. After treatment, animals can present transitory hemoglobinuria.
If no recovering is observed from clinical signs within 24-28 hours, consult your veterinarian. Do not use this product for more than 4 days in a row. The excess of dosage levels or length of the treatment can cause tissue residues of the product beyond the withdrawal period.
Do not use in young growing animals or during pregnancy.
Do not administer together with diuretics or intravenous calcium.

Store in dry and cool place protected from sunlight.
Keep out of the reach of children.
This product should not be used 30 days before the sacrifice of animals intended for human consumption.
Do not consume milk from treated animals within 3 days after last application.

PRESENTATIONS
100 y 500 mL vials.
