Injectable emulsion

### FORMULA

Each mL contains:  
Vitamin A 500 000 U.I.  
Vitamin D3 75,000 U.I.  
Vitamin E 50 U.I.  
Vehicle c.b.p. 1 mL

### PRESENTATIONS

Bottles with 100, 250 and 500 mL.

### USE

Cattle, Equines, Swine, Sheep and Caprines.

### DESCRIPTION

Combination of vitamins of rapid absorption and prolonged action due to the ease with which they are stored in the liver.

### INDICATIONS

It is indicated in vitamin deficiencies and periods of drought, since the lack of green pastures reduces the levels of vitamins obtained in the diet. Indicated in hypovitaminosis A, D and E. It is also indicated in animals with low milk, meat or wool production. Rickets, osteomalacia, anorexia, convalescence.

Coadjuvant in cases of infertility in females and males.

### ROUTE OF ADMINISTRATION

The application must be done by deep intramuscular injection.  
It should not be applied in canines.

### DOSE

Cattle: 2 - 6 mL.  
Horses: 2 - 8 mL.  
Swine: 0.5 - 4 mL.  
Sheep and Caprines: 0.5 - 3 mL.

### WARNINGS

Shake well before use.  
Once the container is opened, use the contents completely.  
Store in a cool place and protected from sunlight.

VETERINARY USE.  
CONSULT THE VETERINARY PHYSICIAN
