

Hemobac

Emulsified bacteria and toxoide

REG. SAGARPA B-2083-007

FORMULA

It contains capsular and somatic antigens as well as cytolysins I, II and III of Actinobacillus (Haemophilus) Pleuropneumoniae serotypes 1,3,5 and 7.

All these antigens have been inactivated and emulsified with an oil adjuvant.

PRESENTATIONS

250 mL.

INDICATIONS

Emulsified Toxoid Bacterin indicated for the prevention of contagious pleuropneumonia of swine caused by infections by Actinobacillus pleuropneumoniae. Indicated for use in healthy swines.

INDICATED SPECIES

Healthy swines.

DOSE

Swines under 25 kg: apply 2 mL.

Swines larger than 25 kg: apply 3 mL.

A second application is recommended two weeks after the 1st dose.

Apply by deep intramuscular route.

ADMINISTRATION MODE

Apply by deep intramuscular injection.

WARNINGS

Once the container is opened, use the contents completely.

Discard the excess product.

Shake the bottle well before use.

Use syringes and sterile needles for your application. Perfectly disinfect the injection area. Before vaccination, make sure that the animals are healthy and show no signs of the disease.

Store in the refrigerator at a temperature between 2 and 7 ° C. Do not freeze. Being a biological product can cause anaphylactic reactions. In this case administer adrenaline or antihistamines. Do not vaccinate 21 days before the sacrifice.

CONSULT THE VETERINARY PHYSICIAN
