

PYOclean® OTO

AUT. SAGARPA Q-2083-2174

Adjuvant of skin infections in dogs.
Purifying ear cleaner for dogs
presenting recurrent channel disorders
auditory due to an imbalance of the microflora.

FORMULA

100% natural active ingredients:

- PhytoC-2® patented extract of hemp flowers: antifungal and anti-bacterial properties.
- Propolis: antimicrobial and anti-inflammatory properties.
- Essential oil of red myrtle: antiseptic properties.
- Lipo-amino acids of green apple: natural and soft ceruminolytic agent.

PRESENTATIONS

PYOclean® Oto for dogs:
10 mono-dose of 5 mL

INDICATIONS

PYOclean® Oto is a purifier and cleaner for the care of the ear based on 100% natural ingredients that allow an efficient cleaning of the external ear channels, while it is particularly adapted to optimize the management of otitis externa. Packaged in mono-dose, PYOclean® Oto not only ensures accurate dosing, but also avoids all risks of cross-contamination between the ears. Its "3 in 1" action allows cleaning, purifying and calming the ear canals in an efficient, safe and smooth way thanks to its non-irritating formulation with a physiological pH.

DOSE AND ROUTE OF ADMINISTRATION

Shake well before using. Turn and break the upper part, instill the entire contents in the ear canal, massage the ear canal from the base of the ear towards the hole and clean the excess product. Use 1 mono dose per ear. Always use the time that is necessary.

The frequency of use will be evaluated according to the epithelial migration of the animal, indispensable as a mechanism of self-cleaning and self-repair of the auditory canals.

The frequency and duration of its use must be tailored to each case. The recommended protocol for typical cases is the following:

- Absence of epithelial migration with erythema and / or pruritus: apply every 2 days for 2 weeks before re-evaluating
- Partial epithelial migration with moderate erythema: apply twice a week for 2-3 weeks before re-evaluation
- Partial epithelial migration without erythema: apply once a week for 2-3 weeks before re-evaluating

Near-normal epithelial migration: applied once every two weeks for 3-4 weeks before re-evaluation

A regular and continuous application of PYOclean® Oto ensures satisfactory ear hygiene and helps manage external otitis.

USE TIPS

With a formula without soap and with a natural physiological pH, PYOclean® Oto is safe for frequent use as a normal cleanser, without side effects, even for the most sensitive ears. Thanks to its remarkable depurative and ceruminolytic action, PYOclean® Oto is also recommended for dogs with recurrent otitis, helping to restore the ear canals and epithelial migration before administering a treatment.
