

RabiLap®

REG. SAGARPA B-2083-032

FORMULA

Rabies virus strain P.V., propagated in cell cultures, inactivated and adsorbed on aluminum hydroxide gel as an adjuvant.

INDICATIONS

RabiLap® is a vaccine for the prevention of rabies in healthy dogs and cats.

DOSAGE AND ADMINISTRATION:

Canines and felines: 1 mL.

It is recommended to vaccinate animals from 3 months of age.

If animals under this age are vaccinated, they must be re-vaccinated at the age of three months.

Revaccinate annually.

Administer subcutaneously or intramuscularly.

WARNINGS

Shake well before use.

Once the container is opened, use the contents completely.

Keep refrigerated at a temperature between 4 °C and 8 °C, do not freeze.

During your application, handle aseptically. Stay cool

Needles and syringes should be sterilized by boiling or autoclaving, but never with alcohol, formalin and other similar chemicals. A different needle should be used for each animal.

Dispose of the container securely, lock or incinerate.

PRESENTATIONS

Single dose vial 1 mL.

VETERINARY USE.

CONSULT THE VETERINARY PHYSICIAN.
